❖ Errors And With His Solution

❖ Error 1: Missing closing bracket

➢ **Error:**

```
print("Variance:", variance
```

➢ **Solution:**
Add) at the end.

```
print("Variance:", variance)
```

❖ Error 2: No proper indentation inside first while loop

➢ **Error:**

```
while i < n:
value = int(input("Enter value: "))
```

➢ **Solution:**
Indent the statement inside the loop.

```
while i < n:
   value = int(input("Enter value: "))
```

❖ Error 3: Total and counter not indented in loop

➢ **Error:**

```
while i < n:
   value = int(input("Enter value: "))
total = total + value
i = i + 1
```

➢ **Solution:**
Indent both statements inside the loop.

```
while i < n:
   value = int(input("Enter value: "))
   total = total + value
   i = i + 1
```

❖ Error 4: Variance calculation not indented in second loop

Error:

```
while i < n:
variance = variance + (value - mean) ** 2
```

➢ **Solution:**
Indent the calculation inside the loop.

```
while i < n:
   variance = variance + (value - mean) ** 2
```

❖ Error 5: Loop counter not inside second loop

➢ **Error:**

```
while i < n:
   variance = variance + (value - mean) ** 2
i = i + 1
```

➢ **Solution:**
Place the counter inside the loop.

```
while i < n:
   variance = variance + (value - mean) ** 2
   i = i + 1
```

❖ Error 6: print not indented under if condition

➢ **Error:**

```
if variance < 0:
print("Impossible variance")
```

➢ **Solution:**
Indent inside the if block.

```
if variance < 0:
   print("Impossible variance")
```
